Digital Stereo Data**

The Town of Sussex is located in Southern New Brunswick, strategically located between Moncton, Saint John and Fredericton. Situated on an active transportation corridor and surrounded by commercial industry, Sussex has become one of New Brunswick's fastest growing communities. In order to guide the growth of communities such as Sussex, accurate GIS data is being sought throughout our region. However, the high cost of accurate, aerial photography has kept this essential data out of reach of communities for years, until now.

Leading Edge Geomatics has begun a *Community Mapping Program*, designed to offer our Orthoimagery and photogrammetrically derived elevation data throughout the region, at competitive pricing. We are able to do this through the effective use of industry adopted current technologies, providing our datasets GIS ready in the projection, datum and format you choose, with exceptional resolution and accuracy.

We're committed to this region, its growth and prosperity. We operate our USGS certified digital cameras and aircraft from our company headquarters at the Fredericton Airport. We promote technology within the region by employing local university and college graduates to process all data within our facility, keeping the work where it belongs.

Experience what other communities already have – Leading Edge Geomatic's digital advantage. Cornerbrook, Amherst, Grand Falls and Charlottetown are among the communities using our products on a daily basis for GIS, planning and development; crime analysis; land parcel administration; vector collection; land surveying; tax assessments; tourism and green space management.

If you have any questions regarding our leading edge solutions, please get in touch with us today.
